**Re clm 1 and 13**

- Said rotation and extension/retraction joint mechanism is constructed so that it couples said first link and said second link in such a manner that as the second virtual center line rotates relative to the first virtual center line from a state where the first virtual center line entirely overlaps with the second virtual center line
- An intersection between the first virtual center line and the second virtual center line moves on the first virtual center line by a predetermined distance corresponding to an angle of the rotation
- A first rack gear provided at said first opposed wall portion and extending along the second virtual center line
- Said first sector gear being slidably supported by said first opposing wall portion so that said first sector gear rolls on said first rack gear and slides along the first virtual center line
- A second rack gear provided at said second opposing wall portion and extending along the first virtual center line

- Said second sector gear being slidably supported by said second opposed wall portion so that said second sector gear rolls on said second rack gear and slides along the second virtual center line
